

USForex Web Service - API

The USForex Web Services solution allows third parties to build and run their own service using foreign exchange and payment 'building blocks' provided by USForex.

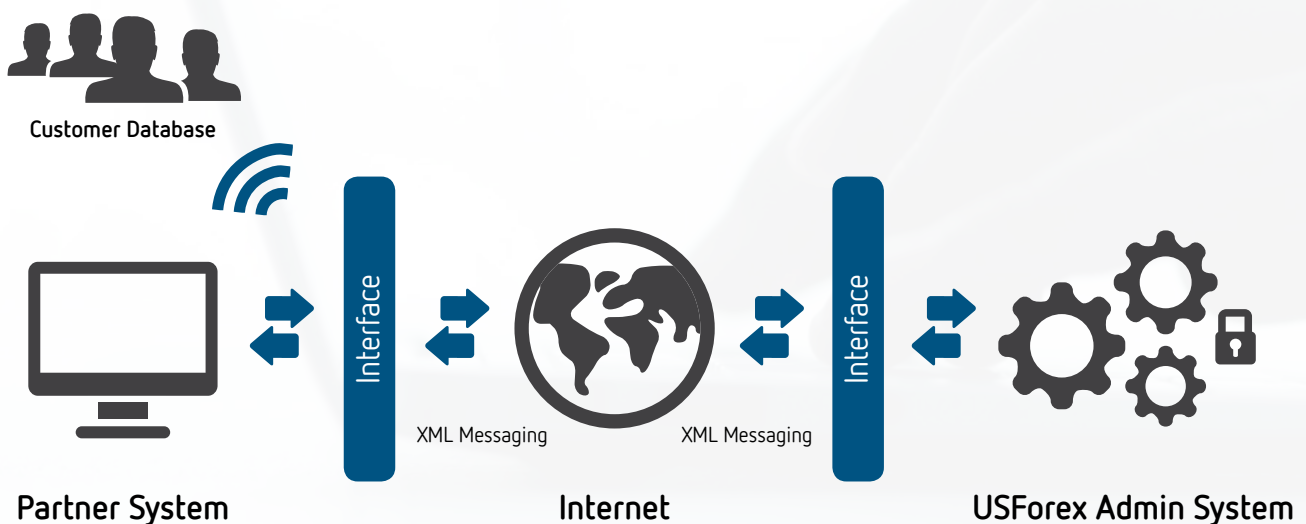

Once connected the partners platform, website or software can quickly and easily call our service for quotes, executable live rates, beneficiary, payment details and confirmations.

USForex provides guidance and development requirements which allows our Partner to maintain direct control over the client relationship. Customer information remains within Partner's websites and has no direct contact with USForex. Customer experience is controlled by the Partner through platform design and customer service.

Behind the scenes USForex will administer trade booking, market risk, and payment delivery. Additionally all regulatory reporting is handled by our industry leading payment systems and dedicated compliance staff.

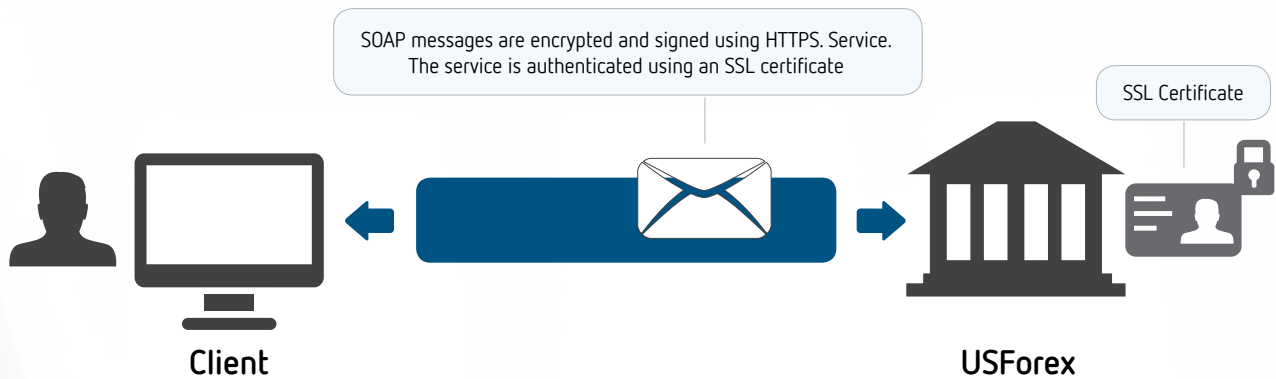

How it works?

- Our partners develop a front end user interface into their existing product - whether that be a platform, website, or software offering.
- The requirements for general fields and necessary information is provided in an easy to use development guide and supported via advice and guidance by the USForex IT development team.
- Once complete the partner is enabled to connect via XML messaging into a secure profile on the USForex Web Services API.

Systems & Required Language

All communications to the USForex API are made using HTTPS. In simple terms our platform allows systems to communicate in a safe and secure manner.

Once enabled our Partners can:

- Request quotes for currency pairs at live executable rates
- Subsequently book deals against the quoted rate
- Submit beneficiary payment details to USForex for settlement of the purchased currency
- Request reports to be used for reconciliation prior to settlement

Our Partners are then able to customize their mark-up based on their client base and expert guidance on Foreign Exchange from USForex. This model allows the partner to manage the revenue and maintain direct control of the client relationship.

Regulatory Excellence

Most importantly our best in class regulatory and compliance regime ensures that the upmost level of due diligence is conducted on each payment. This includes electronic verification, PEP, and Sanction Screening to protect the client as well as the Partner and their brand. Additionally the system completes all regulatory reporting and is appropriately licensed with regulatory bodies across our operating jurisdictions.

USForex Support

The USForex system will respond to quote requests with live rates, accept deal bookings, and provide appropriate deal reference numbers. In the background our network and staff will hedge deals and manage the delivery of FX to the client's intended beneficiary.

Our Partners are also eligible for a dedicated Relationship manager and given access to 24 hour global support in relation to their account. Additionally partners are granted access to a wealth of partnership tools and guidance to drive volume into their FX offering.

Build a new revenue stream by augmenting your existing service with an international payments solution for your customers.
